### **Executive Message.....**

Supply chain management is being recognized as the management of key business processes across the network of organizations that comprise the supply chain. The Global Supply Chain process consists of eight key processes that make up the core of supply chain management and those are; • Customer Relationship Management, • Customer Service Management, • Demand Management, • Order Fulfillment, • Manufacturing Flow Management, • Procurement, • Product Development and Commercialization and • Returns.

While many have recognized the benefits of a process approach to managing the business and the supply chain, most of us are vague about what processes are to be considered, what sub-processes and activities are contained in each process, and how the processes interact with each other and with the traditional functional silos.

APICS Central Jersey Chapter's education program helps employers and employees in NJ improve their understanding of SCM Processes, techniques and latest technological tools. We are currently conducting many public and private classes and we can also deliver the same education or a custom version directly to your facility if that better suits your needs. Visit us at <http://www.apics-cjer.org/upcoming-events/education-calendar.html> for upcoming education program details.

We are also welcoming volunteers to participate in our chapter activities and board. In addition, don't forget to join us our Exclusive FedEx Tour on March 14<sup>th</sup> 2013. <http://www.apics-cjer.org/upcoming-events/pdm-meetings.html>

Look forward to seeing everyone...
